

SMALLIN CIVIL WAR CAVE

Welcome Cavers!

We invite you to visit Smallin Civil War Cave this year for a memorable field trip full of wild life, geology, history, and more!

Smallin Civil War Cave is located north of Ozark, MO - less than 3 miles off highway 65.

The History

Smallin Civil War Cave was inhabited by the local Osage tribe when it was documented by Henry Rowe Schoolcraft in 1818. He was greeted by members of the tribe who called the cave *Winoca* ("Underground Spirit").

When Christian County was settled, its residents used Smallin Cave for shelter, food storage, and as a gathering place in the cool mouth during hot summer days.

During the Civil War, folklore says that the cave was used by both the Union and Southern Troops. The Local area is rich with Civil War history spanning from the first major battle in the western theater to the hanging of the last of the Baldknobbers.

Wildlife and Geology

Smallin Cave is a geological wonder teeming with life, and your visit will often include sightings of bats, salamanders, cave crickets, and rare Bristly Cave Crayfish. The white shells and sightless eyes of the crayfish are bound to make a lasting impression on your students, as well as to give a personal first-hand look into the beautiful, fragile world beneath us.

The Burlington layer of limestone contains the remains of a shallow ocean that once covered the Ozarks. Smallin Civil War Cave is encased in this layer, revealing the fossils of an ancient coral reef. Many of these fossils can be viewed from the visitor trail and in the display area of the gift shop.
